## **Evaluation Methods Used:**

A sighted Web Accessibility Specialist familiar with the products conducted the following:

- 1) The Website Accessibility Conformance Evaluation Methodology described at <https://www.w3.org/TR/WCAG-EM/> was followed to define the scope and process of the evaluation.
- 2) The texts were explored. Key pages, content, functionalities, and processes were identified.
- 3) A representative structured sample was selected, and random pages were selected from the structured sample. Note: general knowledge of the texts was also employed before a status of 'supports' was given for any specification.
- 4) Successes and failures in meeting each WCAG 2 specification were determined and recorded. Accessibility support for the usability of webpage features was evaluated.
- 5) The following assistive technologies were used when evaluating each page and variation of that page:
  - NVDA screen reader on Firefox Browser
  - Keyboard only input
  - Touch only input
  - Magnification in the browser to 200%
  - Windows High Contrast mode
  - Windows Color Filtering setting

- Windows Text resizing settings.
