## Evaluation Methods Used:

A Certified Professional in Web Accessibility familiar with the product conducted the following:

1. The Website Accessibility Conformance Evaluation Methodology was followed to define the scope and process of the evaluation: <https://www.w3.org/TR/WCAG-EM/>
2. The text was explored. Key pages, content, functionalities, and processes were identified.
3. A representative structured sample was selected, and random pages were selected. Note: general knowledge of the texts was also employed before a status of ‘supports’ was given for any specification.
4. Accessibility support for the usability of the webpage was evaluated. Successes and failures in meeting each WCAG 2.1 specification were determined and recorded.
5. The following technologies were used when evaluating each page and variation of that page:
  - Windows 11 OS, Windows 10 OS
  - Automated testing tools Axe by Deque and ANDI
  - The Color Contrast Analyzer
  - NVDA screen reader on Firefox web browser
  - NVDA screen reader on the Chrome web browser
  - Keyboard-only input on Firefox, Chrome, and Edge web browsers
  - Touch-only input on Firefox, Chrome, and Edge web browsers
  - Magnification in the browser to 200% on Firefox, Chrome, and Edge web browsers
  - Resizing and reflow of content when seen in a responsive screen size of 320 CSS pixels wide by 256 CSS pixels tall on Firefox, Chrome, and Edge web browsers/ browser zooming to 400%.

- Windows system text-resizing settings, and text spacing testing using the “Text Spacing” tool by the Paciello Group.
  - Windows High Contrast Mode
6. PDF documents are tested using Adobe built in accessibility tools and the PDF Accessibility Checker 2024 tool from Axes4.
